

BENT JACOBS

Salesforce Developer

I'm a software engineer with experience in both frontend and backend development, passionate about building efficient, scalable software solutions and engaging user experiences. In my current role as a Salesforce Developer, I focus on customizing and automating business processes within the Salesforce ecosystem. This experience has deepened my interest in Salesforce development, and I'm motivated to further grow in this field while continuing to expand my full-stack expertise.

EXPERIENCE

Salesforce Developer
Ittes | Turnhout

april 2025 - present

Working in a small, close-knit team to deliver customized Salesforce solutions for various clients. I am involved in projects from analysis to deployment, contributing across the full development lifecycle.

I build and configure solutions using Lightning Web Components (LWC), Apex, and Visualforce, while leveraging Salesforce's declarative tools such as Flows to automate business processes. When requirements go beyond standard configuration, I implement custom Apex logic, including invocable methods and triggers, to support more complex or performance-sensitive scenarios.

A significant part of my role involves direct client interaction: gathering and analysing requirements, advising on best practices, translating business needs into efficient technical solutions, and supporting clients throughout implementation and adoption.

Software Engineer

june 2024 - april 2025

Organi | Wilrijk

At Organi, I worked as a software engineer, developing tailored software solutions for clients in the recycling industry. I collaborated with a team to design, implement, and maintain applications, focusing on reliability and performance. This role strengthened my skills in problem-solving, customer-oriented development, and efficient teamwork.

Internship

march 2023 - june 2023

ScoptVision | Leuven

During my internship at Scoptvision, I mainly focused on analysing different front-end frameworks, React/React Native & Flutter specifically, and when the choice was made I set up the core components of the application. The outcome of the intense 3 months was a much appreciated programming of the design of the application in a new front-end framework (Flutter/Dart).

Youth house - Head of board

2020 - present

Jeugdhuus De Nok | Vosselaar

Lead and coordinate the operational management of the youth center. Responsible for planning, team coordination, event organization, and communication with the municipality.

Scouts - Monitor

2019 - 2024

Scouts Don Bosco | Vosselaar

After being a member myself for 11 years, I became a monitor. Now, every Sunday, I give the best of myself to give teenagers the time of their life. I lead the team of monitors to come up with an exciting activity for the kids.
